

GROUP PROJECT MTH2005

Martin Greenall

Overview

- Conduct **research** as a group on a mathematical topic
- Five one-hour **meetings** attended by the project supervisor
- Produce an in-depth **report** and a video **presentation**
- Each group member takes responsibility for an **individual chapter** of the report and **section** of the presentation

Group roles

- Chair
- Secretary
- Report coordinator
- Presentation coordinator
- Research coordinator
- Other roles as required

*The chair and secretary will prepare an agenda before each meeting and minutes of each meeting will be produced to be **included as an appendix of the group report.***

Assessment

- **10%** peer assessment
- **20%** video presentation – scored individually
- **70%** report – each chapter scored individually; introduction, conclusion and evidence of teamwork (e.g., minutes of meetings) scored as a group

The report

- You should be able to teach the topic to another student in your year group **using the report as a textbook**
- Include **worked examples** where possible
- The report should form a **coherent whole**
- Focus on the **mathematical/scientific** content of your project area
- Short abstract, 2-3 pages of introduction, main body of text, a 1-3-page summary/conclusion, bibliography and appendices
- Communal sections should be written as a group
- Each chapter should show evidence of **research** and **critical thinking** and include **references (IEEE style)**
- **Include meeting minutes as an appendix**

Video presentation

- Typical individual contribution: **3 minutes**
- An **introduction** and **conclusion** should also be included
- Assume that the audience consists of the other students in your year group
- A range of software is available: PowerPoint, Teams, Panopto etc.

Advice

- Use a shared OneDrive folder/Microsoft Teams site
- Have meetings outside the scheduled sessions
- Set targets and agree internal deadlines
- Try to resolve problems within the group. In case of difficulties, ask your project supervisor. If they cannot resolve the issues, contact the module coordinator (Martin Greenall)

Group A: Role of computers in mathematics

- Ellis King
- Jacob Coles
- Kyle Owen
- Luca Avola
- Matthew Moss
- Satveer Pawar

Group B: Symmetries, pattern art and wallpapers

- Alex Mason
- Beck Squires
- Caitlin Warburton
- Isobel Gordon
- Rebecca Shillito
- Sammy Greenwood

Group C: Dynamical models of love

- Becca Callow
- Chun Hin Cheung
- Lily Hutton
- Olek Szoltysek
- Sam Ulusoy
- Sophie O'Dwyer

Group D: Group actions

- Abbie Hall
- Alice Boyd
- Corey Lumb
- Jack Audis
- Nathan Grieve
- Thomas Holmes

Group E: Bessel functions

- Alex Rushworth
- Daniel Morris
- Hayden Loyseau
- Katie Arnold
- Tom Ward
- Torin Anderson
- William Fayers

Group F: Operational research

- Amber Wilcock-Thomas
- Asa Harrison
- Grace Sale
- Kieran Alwill
- Lily Barker
- Patrycja Golos
